# DL-VizLab palette summary

Every colour that carries meaning, in both themes, and every pair that must stay distinguishable, with its measured distance (ΔE in OKLab × 100; target ≥ 15 under normal vision, protanopia and deuteranopia, from `reports/cvd.json`). Page 2 shows one representative capture per view. The exhaustive set — every experiment, both phases, protanopia too — is `figures/palette-sheet.pdf`.
